Networking Commands

ifconfig	Display network interface information.	ifconfig shows the details of all network interfaces.
ping	Send ICMP echo requests to a host.	ping google.com sends ICMP echo requests to "google.com" to check connectivity.
netstat	Display network connections and statistics.	netstat -tuln shows all listening TCP and UDP connections.
ss	Display network socket information.	ss -tuln shows all listening TCP and UDP connections.
ssh	Securely connect to a remote server.	ssh user@hostname initiates an SSH connection to the specified hostname.

scp	Securely copy files between hosts.	scp file.txt user@hostname:/path/to/destination securely copies "file.txt" to the specified remote host.
wget	Download files from the web.	wget http://example.com/file.txt downloads "file.txt" from the specified URL.
curl	Transfer data to or from a server.	curl http://example.com retrieves the content of a webpage from the specified URL.

*** uniq command

- 1) Create the file with name Firstnames.txt

antoine
xavier
steven
patrick
xavier
antoine
antoine
Steven

- 2) \$ sort firstnames.txt | uniq

antoine
patrick
steven
Xavier

- 3) To display only the rows that appear only once, use the -u option:

\$ sort firstnames.txt | uniq -u

*** Find command

```
find /var/log -name "*.log"
```

*** SED command

```
sed -n '/ERROR/ p' log.txt
```

```
sed 's/ERROR/CRITICAL/' log.txt
```

```
awk '/ERROR/{print $0}' log.txt
```

*** AWK command

```
awk '{print $1, $2}' log.txt
```

```
awk -F "," '{print $1, $2}' log.txt
```
